## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. § 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the Issue Fee.

2. Pursuant to MPEP 606.01, the title has been changed to read:

-- A SYSTEM USING ROUTING BRIDGES TO TRANSPARENTLY  
INTERCONNECT MULTIPLE NETWORK LINKS TO FORM A SINGLE  
VIRTUAL NETWORK LINK --

3. The following is an Examiner's Statement of Reasons for Allowance:

Thubert et al., Patent No. 6,603,769, teach function of a bridge is to make large interconnected networks look like a single flat LAN. Bridges act at MAC layer level and listen to all message traffic on all networks (e.g. LANs) to which it is connected and to forward each message onto the networks other than the one from which the message was heard. Bridges also maintain a database of station locations derived from the content of the messages being forwarded. After a bridge has been in operation for some time, it can associate practically every station with a particular link (i.e. path) connecting the bridge to a network (e.g. LAN). There are two main types of bridges: Transparent Bridges and Source Route Bridges, and combinations of these. If several networks are interconnected by bridges and form a closed loop, a message may be circulated back to the network from which it was originally transmitted, which may flood the

internetworking facility and jam the traffic. To prevent the formation of such closed loop a so-called Spanning Tree algorithm has been developed to connect the bridged networks into a tree configuration containing no closed loops. The spanning tree algorithm is executed periodically by the bridges on the interconnected network to ensure that the tree structure is maintained, even if the physical configuration of the network changes. The bridges execute the spanning tree algorithm by sending special messages to each other to establish the identity of a "root" bridge. The algorithm determines which links of the bridges are to be active and which are to be inactive, i.e. disabled, in configuring the tree structure. Each network has a "designated" link which means that one of the links connectable to the network is designated to carry traffic toward and away from the root bridge. The basis for this decision is similar to the basis for selecting the root bridge. The designated link is the one providing the least costly (shortest) path to the root bridge, with numerical bridge identification being used as a tie-break. Once the designated links are identified, the algorithm chooses two types of links to be activated or closed: first, for each network its designated link is chosen, and second, for each bridge a link that forms the "best path" to the root bridge is chosen, i.e. a link through which the bridge received a message giving the identity of the root bridge. All other links are inactivated. Execution of the algorithm results in interconnection of the network and bridges in a tree structure, i.e. one having no closed loops. The prior art of record teaches the claimed invention substantially as discussed above, but it fails to teach or suggest individually or in combination that if a destination for a packet resides on the same virtual network link, using routing bridges to route the packet to the

destination, wherein the route can be an optimal path to the destination, and is not constrained to lie along a spanning tree through a set of routing bridges as set forth in claims 1, 17, and 33. Claims 1-40 are allowed because of the combination of other limitations and the limitation listed above.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
